Enable_if template class specialization

Does not happen. However, changing constructors can be as compliant as additional default arguments. Class template specializations can be enabled or disabled with `enable_if`. An additional template parameter is needed. The second argument of `lazy_enable_if` must be a class type that defines a nested type called `enable_if_t`. This is the second argument of `enable_if`. Translated from latex by HEVEA. Heveka.
